Senza BWMS certification

USCG Type Approval

IMO Type Approval (BWMS Code)

Technology

Senza BWMS uses direct biocide injection to treat ballast water. To the owner's as well as the yard's benefit the system **does not require the use of filter**. Neutralizer is injected when discharging ballast water. Standard, non-proprietary chemicals are used during ballast (Sodium Hypochlorite) and de-ballast (Sodium Sulfite) operations.

Senza BWMS simplicity makes it easy to install on both new and old ships. Only minor modifications to the ballast piping are needed to retrofit Senza BWMS, making it possible to complete the installation while sailing.

The system includes limited moving parts and no complex equipment resulting in minimal maintenance and easy operation for the crew.

TeamTec

Norwegian traditions

TeamTec is continuing a tradition of maritime industrial activity at Tangen in Tvedestrand, Norway, dating back to around year 1700. Today TeamTec is a well-recognized name in the maritime industry. Our company has been built up around decades of manufacturing and sales of maritime waste incinerating systems, as well as stripping ejectors to the shipbuilding industry. TeamTec is on a continuous growth path and in recent years TeamTec has also been offering ballast water management systems (BWMS) to the maritime sector.

TeamTec was founded on the national day in 1984, by a small group of ambitious and enthusiastic pioneers. Their enthusiasm and passion is carried forward by the entire TeamTec staff. We take great pride in supplying our quality products to the demanding shipping and offshore markets. TeamTec is confident that our products will continue to be at the forefront of global maritime technology in the future.

We are proud to supply quality products and service from our worldwide service network.
