

TeamTec expands product portfolio with newly developed Senza Ballast Water Management System without filter

Tvedestrand, Norway, 16th February 2021

TeamTec AS of Norway has signed an agreement with Kurita Water Industries Ltd. in Japan for the acquisition of all certificates and rights for a newly developed ballast water management system. This will be branded as TeamTec Senza BWMS.

Senza BWMS uses direct biocide injection to treat ballast water. To the owner's as well as yard's benefit the system does not require the use of filters. Neutralizer is injected when discharging ballast water. Standard, non-proprietary chemicals are used during ballast (Sodium Hypochlorite) and de-ballast (Sodium Sulphite) operations. Senza BWMS simplicity makes it easy to install on both new and old ships. Only minor modifications to the ballast piping are needed to retrofit Senza BWMS, making it possible to complete the installation while sailing. The system includes limited moving parts and no complex equipment resulting in minimal maintenance and easy operation for the crew.

LI = LEVEL INDICATOR FM = FLOW METER TRO = TOTAL RESIDUAL OXIDANT

Senza BWMS has been developed by Kurita Water Industries and will be offered to the global market by TeamTec AS. The system combines the best of two worlds with a design based on Japanese quality standards and attention to detail, as well as product supply based on Norwegian maritime tradition and a well-established maritime support organization.

“We see a high interest for a hassle-free, yet competitively priced BWM system which hardly uses any power and offers minimum installation cost”, says Olav Voie, CEO at TeamTec. “We experience increasing demand from yards and shipowners for BWM systems that do not use filters and are easy to install. Senza BWMS will enable us to offer a system with extremely low installation costs, as well as being a very competitive alternative for vessels traditionally using a UV system. With Senza there is no risk of experiencing a clogged-up filter that disrupts operation resulting in extending the vessel’s time in port and unwanted delays.”

“Senza BWMS will be a valuable extension to our product range and fits right into our globally present sales, service and manufacturing organization”, Mr. Voie continues. “We think it is of value for customers that the ballast water management product range is offered by an already profitable and solid company with a diversified product portfolio. Shipowners can have confidence that we, as the supplier, are in the market to stay. Senza BWMS will allow us to extract synergies between product ranges and to streamline our service organization even further”, he adds.

Senza BWMS is fully IMO G8/G9 as well as USCG approved.

About TeamTec

TeamTec AS is one of the world leaders in manufacturing and sales of waste incinerators and ejectors to the maritime industry, in addition to supplying TeamTec Oceansaver BWMS. TeamTec has a strong presence worldwide in shipbuilding markets and has an established global sales and service organization. TeamTec is a member of IMS group and a very well recognized name in the maritime industry. TeamTec AS was founded in 1984, and is headquartered in Tvedestrand, Norway.
